

# Project Proposal

## **The Idea:**

Solving the crisis of unavailability of work for many industrialists, self-employed and artisans, so we thought of establishing the service provider site that would be a mediator between the industrialist and the customer.

## **Target customer:**

Our primary target customers are Egyptians seeking accessible to solve there problem fast

## **The Problem:**

Technicians, workers & self-employed people in Egypt find jobs with difficulty. Therefore, they suffer from the burdens of living. On the other hand, customers who need services or want to fix something, have problems finding suitable workers or technicians. These problems have increased nowadays. So, this platform tries to facilitate communication between the client and the technician. It provides work for technician. It helps clients finding appropriate technicians in service which he chooses.

## **The Solution:**

It enables client to search about technicians in any service by entering government and city. The result of searching depends on higher technicians 'rating.

It helps the client in reaching the appropriate technician in all services, depending on his location and the cost specified for service and technician ' rating.

## **Features and Functions:**

- 1- **Home Page Function**
- 2- **Home Dashboard Function.**
