

# Project Proposal

## The Idea:

**Med-Care** is designed as a comprehensive solution

Which addresses the complex challenges that many patients face in booking an appointment with a doctor who revealed rumor analysis and others to reduce time and effort and provide service to the patient with high efficiency. It is a digital medical center that connects the private clinics (the doctor), patient, and the analysis and x-ray laboratories in order to facilitate and accelerate the process of detection and treatment for the patient.

## Target customer:

clinics (the doctor), patient, and the analysis and x-ray laboratories

## The Problem:

Many patients waste quite a bit of time searching for the best doctors and analysis and x-ray laboratories, and they also waste a lot of time waiting until they are done.

## Your Solution:

Med-Care helps reduce time and effort in searching for the best doctors, knowing appointments, and booking the most suitable appointment.

# Site Structure:

## basic

- home page
- login
- registration

The system will consist of 2 main user roles:

- **doc** Admin
- **patient** Admin

Each role will have access to specific features and functionalities tailored to their responsibilities.

# Features and Functions:

- After registering, the doctor completes his own page and adds the address, working hours, and examination price
- The doctor can print a complete sheet with appointment times
- The user can view all the doctors and cannot make a reservation with any of them unless he registers on the account
- After registering, the patient browses doctors, whether searching by name or specialty
- The patient books a suitable appointment with the doctor and is evaluated by the doctor after completion

# Additional Features:
